

Advanced IoT-Based Air Quality Monitoring Systems Using LoRa-WAN Technology for Smart City Applications

Krishan Athapaththu-Hewa-Medillagoddage

Faculty of Automation and Computing

Polytechnica University of Timișoara

Timișoara, Romania

Email: krishan.medillagoddage@student.upt.ro

Abstract—

Index Terms—IoT, LoRa-WAN, air quality monitoring, smart cities, low-cost sensors, machine learning calibration

I. INTRODUCTION

II. LITERATURE REVIEW

A. Technological Foundations and System Architectures

- 1) *Comprehensive System Integration Framework:*
- 2) *Modular Hardware Architecture:*
- 3) *Advanced Power Management and Sustainability Integration:*

B. Sensor Technologies and Measurement Capabilities

- 1) *Multi-Parameter Sensing Platform Development:*
- 2) *Advanced Calibration Methodologies and Machine Learning Integration:*
- 3) *Comprehensive Sensor Integration Strategies:*

C. LoRa-WAN Communication Technology and Network Design

- 1) *LPWAN Technology Analysis and Selection Rationale:*
- 2) *Large-Scale Network Implementation and Scalability Demonstration:*
- 3) *Network Performance Characteristics and Field Validation:*

D. Data Management and Visualization Platforms

- 1) *Cloud-Based Data Integration Architecture:*
- 2) *Multi-Interface Data Access and Advanced Visualization:*

E. Deployment Strategies and Real-World Applications

- 1) *Urban-Scale Deployment Methodologies:*
- 2) *Specialized Application Environments and Use Cases:*

F. Performance Evaluation and Validation Methodologies

- 1) *Reference-Grade Instrument Comparison and Validation:*
- 2) *Extended Field Deployment Validation and Statistical Analysis:*

G. Challenges and Limitations

- 1) *Sensor Accuracy and Environmental Impact Challenges:*
- 2) *Communication Technology and Network Limitations:*
- 3) *Power Management and Deployment Challenges:*

III. CONCLUSIONS

IV. RESEARCH PROPOSAL

ACKNOWLEDGMENT
